RAX MEDSCHECK

- Out of all the cognitive services that pharmacists can perform, the **MEDSCHECK** is the most lucrative.
- There are various ways to perform a medication review or **MEDSCHECK**. The most common way is to preprint the **MEDSCHECK** and write everything in by hand.
- Some **MEDSCHECK** are computerized where information can be stored in advance, but in the majority of cases, information discussed with the patient needs to be recorded by hand or re-typed in the software, which increases the amount of time required to complete the **MEDSCHECK**.
- With this tablet, patient information is portable, and accessible; in the counselling room or privately, if performing an unexpected **MEDSCHECK**, it allows patient information to be documented in real time. No need to re-write notes later; since information is recorded in real time, the chance for information loss is near zero.

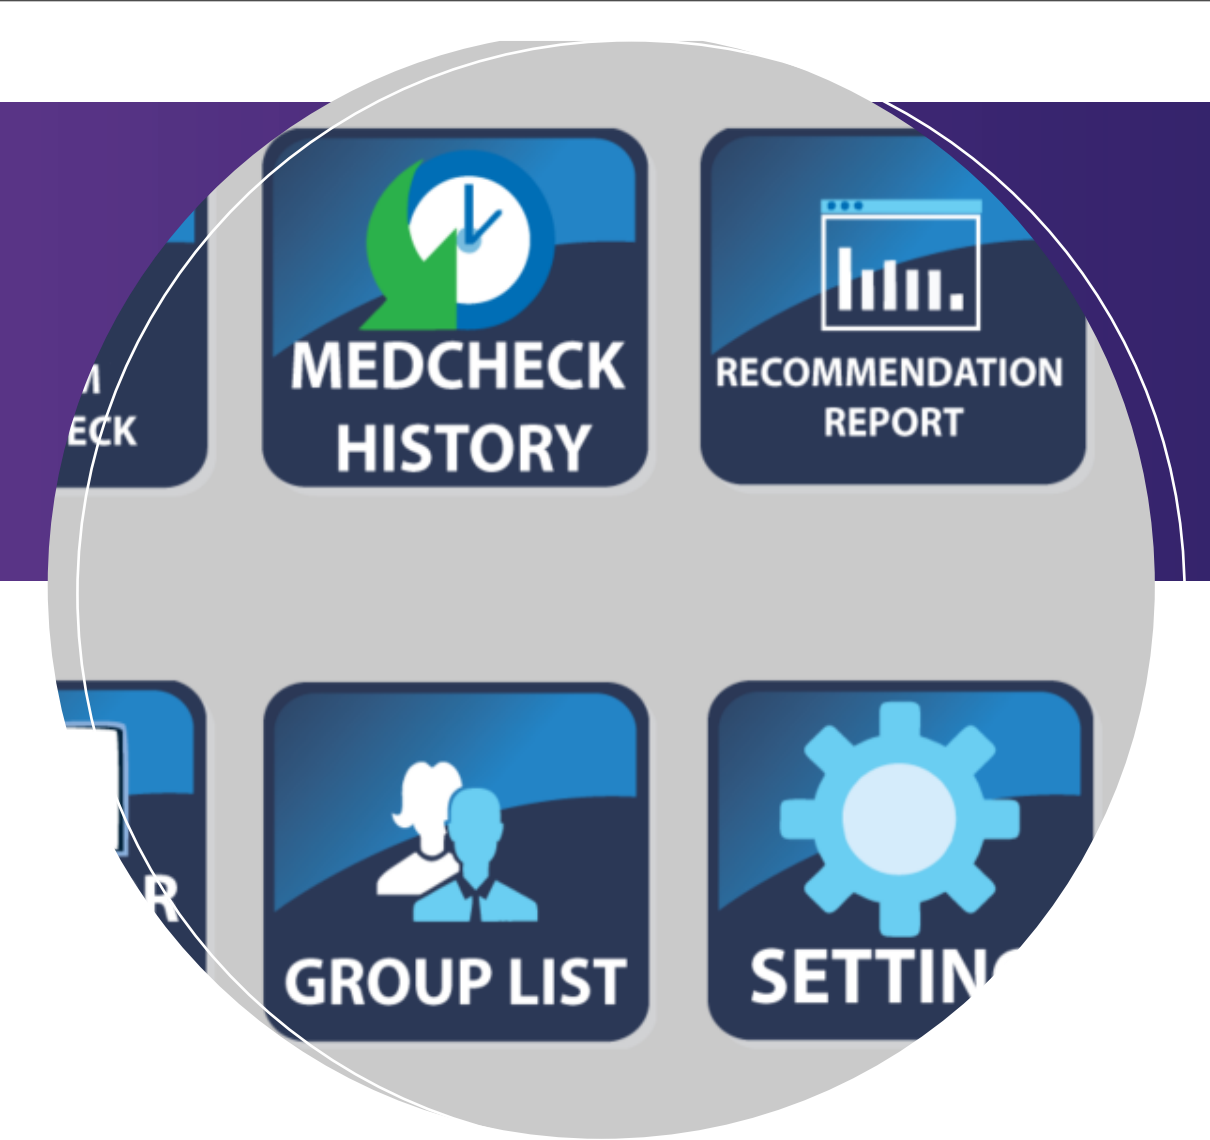

RAX MEDSCHECK

- With our tablet, information can be typed quickly using the integrated tablet keyboard or a separate keyboard
- One of the main requirements of performing **MEDSCHECK** is to determine which medications the patient is taking, when they are taking them and which have been stopped.
- To facilitate this process, we incorporated checkboxes that can be selected on our touch screen. Not only does this speed up the process, but when the report is printed, the patient has a table indicating when their medications are taken, much like a compliance label.
- No other **MEDSCHECK** software has this compliance label feature. You can view, edit and add to the **MEDSCHECK** just with the touch screen

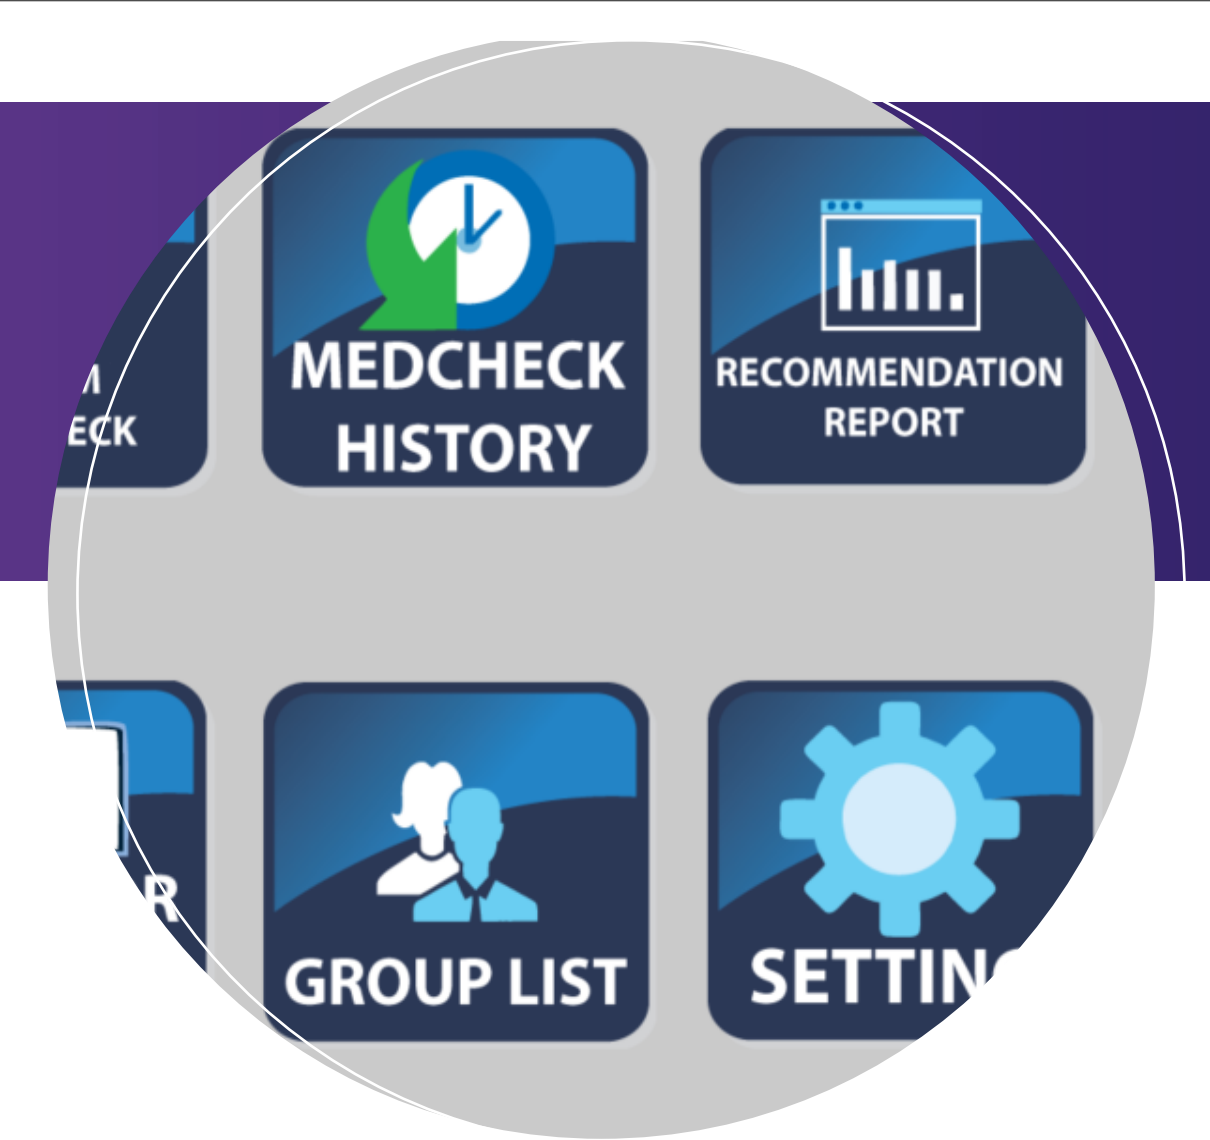

RAX MEDSCHECK

- Once the MEDSCHECK is complete, it can be sent to Kroll and is placed in the *to do folder* for billing.
- Easily engage the patient and the pharmacist by allowing both parties to sign right on the tablet! Getting the patient involved helps create a personal interaction between the pharmacist and patient.
- When the report is finished, the first page is a summary page that can be sent to the doctor outlining any drug related issues. Changes requests or recommendations can be made and if the physician responds, a POP can be invoiced; generating extra revenue for the pharmacy. We can set it up in such a way that this summary report can be faxed directly to the doctor.

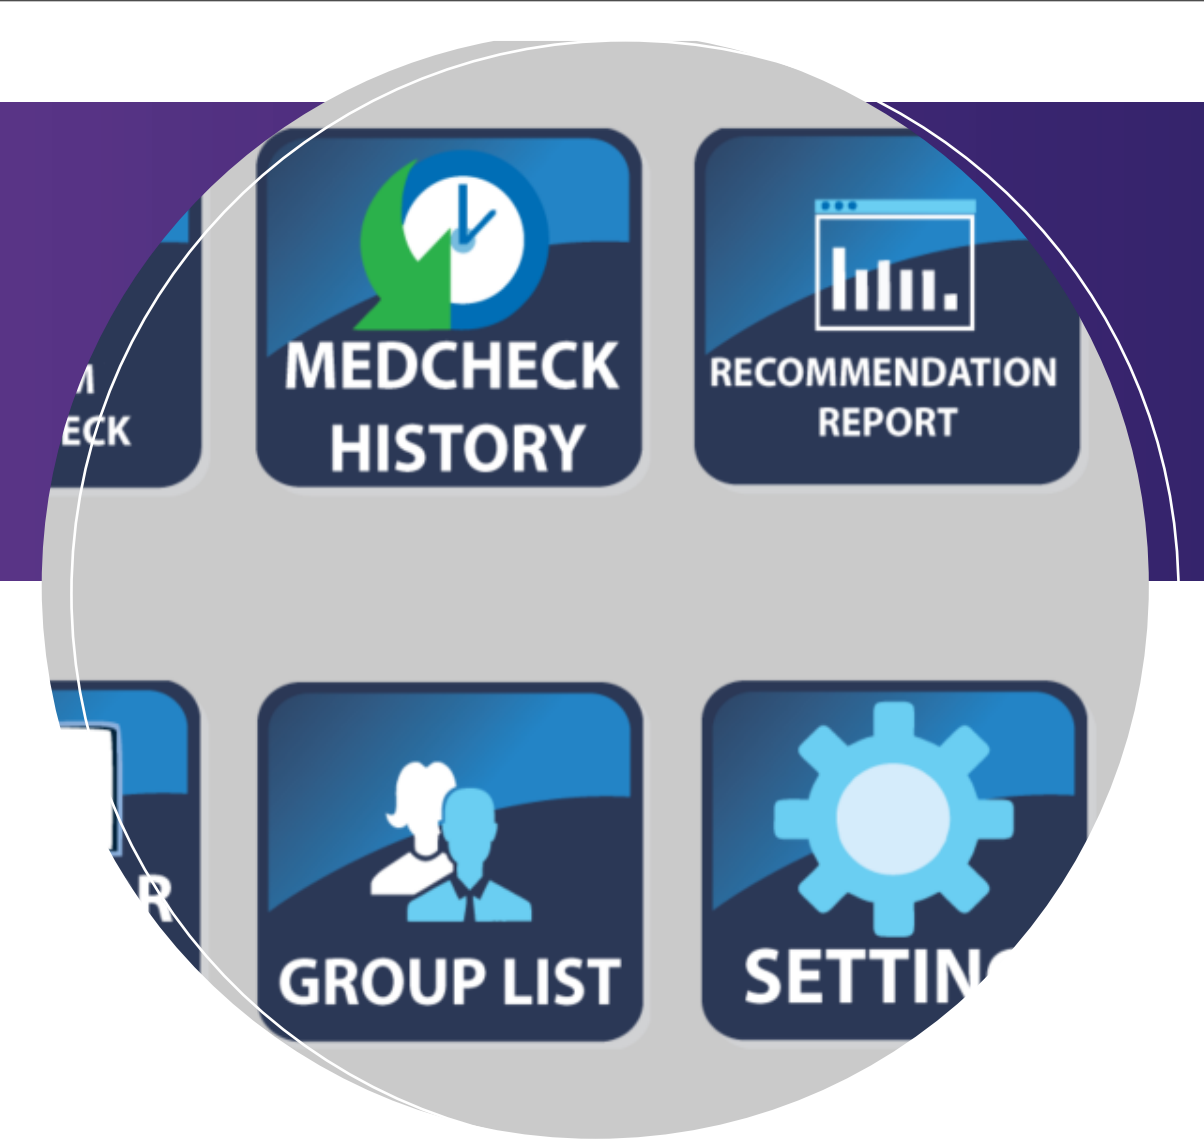

RAX MEDSCHECK

- Another amazing feature is that all annual, diabetic MEDSCHECK and follow up MEDSCHECK are recorded and easily retrievable.
- Perhaps in the course of a busy day, you forget the nature of a certain follow up, simply pull up the MEDSCHECK and consult your follow-up notes.
- Prior to an annual MEDSCHECK, you may want to review what was discussed the previous year. With our app, it's easily accessible and time does not need to be wasted trying to find the MEDSCHECK from the previous year.
- Designed for Retail and LTC pharmacy, multiple homes can be recorded in one tablet.

A screenshot of the RAX MEDSCHECK application interface. At the top, there's a status bar with 'Activity', signal strength, Wi-Fi, 21% battery, and 9:38 AM. Below that is a large white text box containing the text: 'This functionality allows you to assign a group to patients; as per MEDSCHECK types & schedules customized by the home and Pharmacist Consultant.' At the bottom, there's a navigation bar with four blue icons: a clipboard for 'CHECK FOR NEW DATA', two people for 'GROUP', a gear for 'SETTING', and a door with an arrow for 'EXIT'. A hand is shown touching the 'GROUP' icon.
